

A

Task Structure

B

Task Implementation

A Empirical task performance

B Delayed planning in control choices

C Variability in control choices

D Delayed planning in RT

E Learning in control choice and RT

Model diagnostics

A

The benefit of delayed replanning in MBMC

B

Computational model accounts for RT effects

Study 2 – replicating RT effects

State Outcome

A

Task Performance

Goal attainment

A

C

Computational Parameter

β_{MB} = Model-based weight

$$Q_{MB}(s, \tilde{a}) = \begin{cases} \text{Relinquish Control if} \\ Q_{plan}(s, a = 1)_t = Q_{plan}(s, a = 2)_t \\ \text{Take Control if} \\ Q_{plan}(s, a = 1)_t \neq Q_{plan}(s, a = 2)_t \end{cases}$$

B

D

MBMC Parameter explains RT effect

Delayed planning is learned

Memory Quizzes

If you go LEFT here, you get to?

One Step

Take the two actions that get you along this exact route
